CCA DER Services

- TerraVerde provides DER program development management services to CCAs and public agencies.
- These programs create revenue streams and reduce procurement costs for CCAs.
- We believe CCAs can accelerate growth of DERs more efficiently and effectively than individual DER providers.

In partnership with MCE Clean Energy, the Center for Climate Protection and others, the CEC awarded our team a Local Government Innovation Grant to support implementation of distributed energy resource programs through CCAs.

Through development of a Building Energy Optimization tool and three pilot projects, this grant will enable CCAs to prioritize which DERs to promote or procure.

CEC Local Government Innovation Grant

In partnership with CCP, and working with our partners Lancaster Choice Energy and Peninsula Clean Energy, our team was one of nine in the nation to develop innovative approaches and tools to support deployment of solar and other DERs.

This project will develop a Advanced Rate Design tool that will enable CCAs to design rate structures that support the deployment of DER that benefit both the individual customer and the CCA.
